

Effortless Sectioning Solutions

**Cool-Cut™ Paraffin Block Cooler and
Section Transfer System™ (STS)**

Your complete sectioning solution

Pair Cool-Cut™ and Section Transfer System™ with any EpreDia Rotary Microtome to improve quality and efficiency.

Discover the efficiencies of a complete sectioning solution

Pair an Eprelia rotary microtome with the Eprelia Cool-Cut™ paraffin block cooler and the Eprelia Section Transfer System™ (STS) to improve quality and efficiency – two key influencers of positive patient outcome and to prevent damage to the tissue during manual transfer.

Cool-Cut™ Paraffin Block Cooler

- Maintains a cool, consistent temperature for paraffin blocks during the sectioning process
- Eliminates the need to repeatedly ice down blocks
- Particularly effective during extended cutting periods for step or serial sections
- Fast-freezing Peltier device fits directly onto the specimen cylinder of the microtome and can be equipped with a universal cassette clamp or a standard specimen clamp

Section Transfer System™ (STS)

- Sections flow directly to water bath preventing wrinkling or curling of sections or ribbons
- Eliminates manual transfer of the sections into a water bath
- Adjustable water flow rate avoids tissue section damage, allowing for more usable sections per block
- Specially designed disposable blade holder supports the transfer ramp
- Illuminated, aluminum water bath offers excellent section visibility
- User-selectable water temperature from ambient temperature up to +50 °C

Ordering Information

Cool-Cut Paraffin Block Cooler with universal cassette clamp	771110
Cool-Cut Paraffin Block Cooler with standard cassette clamp	771120
